

A JOINT PROPOSITION GIVING THE BANK A RISK-BASED ASSESSMENT THAT THE CORRECT PERSON IS USING THE INTENDED DEVICE

Combining two next-generation authentication experts, the partnership between **InAuth** and **AimBrain** delivers up to six factors of authentication, creating a low friction user experience whilst reducing fraud, lowering costs and complying with financial regulations.

SIX FACTORS

About AimBrain

AimBrain is a BIDaaS (Biometric Identity as-a-Service) platform that combines voice, facial and behavioural biometrics with cloud-based identity authentication. It combines both passive and active biometrics, and its technology is underpinned by proprietary deep learning, building an increasingly accurate profile of a user over time. AimBrain is omni-channel, deployed using open-source SDKs, and adheres to best security practices.
